

# SIGHTLINE 10.2 RELEASE NOTES

February 2024

Sightline Release 10.2 Abstract	
Enhancements3	
Option to enable/disable archiving in a production/export (RPMXCON-45870)3	
Project templates now support redaction propagation settings (RPMXCON-81120)4	
Update UX of the Table View Coding Form to Improve the Cyber Review Efficiency (RPMXCON- 82345, RPMXCON- 82512)5	
Priority Production Issues	1
Domain Admins can see other Domain projects with similar domain name (RPMXCON-83762)5	
Docview: Neardupe score for textualheaderdocumentid & it's neardupe documentid is not similar when both documents get viewed in docview. (RPMXCON-82327)	
Large productions stuck at "Reserving Bates Range In Progress" (RPMXCON-76288)5	
Architectural and Non-functional changes6	,

#### Sightline Release 10.2 Abstract

The 10.2 Release of Sightline provides a new setting to allow users to enable/disable archiving of a production or export. Users can also leverage the recently added (10.1) redaction propagation setting to be copied from a project template. This release also includes some minor UI improvements to the Cyber related table view coding form, DB optimizations and support fixes.

## Enhancements

#### Option to enable/disable archiving in a production/export (RPMXCON-45870)

When creating or editing a production or export, users now have the option to enable/disable archiving in the Production Location step.

Production	•				
Basic Info	Production Components	Numbering & Sorting	Document Selection	Priv Guard	Production Location
Specify Production					1
Specify Production Locati					
Production Root Path:	on	Prod Server 1	PROD_02\01_PRODUCT_DEM	10\BW 10_2 CAL	~
Production Directory:		prod01			<b>-</b>
Load File Path:		•	Z:\		
Volume Included:			Name:	VOL0001	Location:

By default, this option is enabled for productions but can be modified by the user.

When this setting is enabled, an archive (zip file) is automatically created for a generated production, so it can be downloaded from Sightline directly. The archiving process can add additional time to complete the production. The recommendation is to disable archiving if you are not planning to use the Download feature in Sightline to retrieve the production. When the archiving setting is enabled and is in progress, the status on the Generation step will reflect as "Archiving the production/export". When the archiving is disabled, this step will show as "Skipping archiving of production/export".

In this release, this feature has been enhanced to allow for archiving of exports. By default, this option is disabled for exports but can be modified by the user. When this option is enabled for an export, the user will be able to download an export.

Basic Info	Components	Numbering & Sorting	Document Selection	Export Guard	Export Location
Specify Export	Location 🕑				
pecify Export Locat	tion				
Export Root Path	:	Prod Server	1 PROD_02\01_PRODUCT_DEM	0\BW 10_2 CAL	v
Export Root Path Export Directory:		Prod Server Export01	1 PROD_02\01_PRODUCT_DEM	0\BW 10_2 CAL	~
			1 PROD_02\01_PRODUCT_DEM	0\BW 10_2 CAL	~

#### Project templates now support redaction propagation settings (RPMXCON-81120)

When a new project is created from an existing template project, the redaction propagation setting from the template project will automatically display for the new project.

# Update UX of the Table View Coding Form to Improve the Cyber Review Efficiency (RPMXCON- 82345, RPMXCON- 82512)

There are some minor cosmetic changes in this release to the Table View Coding Form, including improvements to the dropdown interface and the background color of the table.

## **Priority Production Issues**

## Domain Admins can see other Domain projects with similar domain name (RPMXCON-83762)

**Issue:** Domain admin users were able to view names of projects that were not specific to their own client domain. This issue was specific to a project *name*, not related to actual project *data*.

**Resolution:** The Manage Projects page in both System Admin and Domain Admin roles properly filter based on role: fuzzy search in System Admin and exact match for Domain Admin user.

# Docview: Neardupe score for textualheaderdocumentid & it's neardupe documentid is not similar when both documents get viewed in docview. (RPMXCON-82327)

**Issue:** When viewing a document and its near duplicate document in the DocView, the neardupe scores were not accurately reflected for each document.

**Resolution:** The correct neardupescorse will get displayed for documents that are near dupes of each other.

#### Large productions stuck at "Reserving Bates Range In Progress" (RPMXCON-76288)

**Issue:** It was seen in some cases that large productions were causing SQL locks while reserving Bates numbers.

Resolution: SQL optimizations to ensure large productions complete as expected.

## Architectural and Non-functional changes

- 1. RPMXCON-82639: Stored proc change from INT to BIGINT to support domain dashboard metrics
- 2. **RPMXCON-82565**: Stored proc change from INT to BIGINT to support large file sizes
- 3. **RPMXCON-82511**: Change to make the nightly Beehive process to capture the Last Activity Date faster
- 4. **RPMXCON-81941:** Coding form Save & Next can result in a SQL Exception when IsComplete = 2
- 5. RPMXCON-74413: Document Management Modularization: All Tasks
- 6. **RPMXCON-62079**: Ensure the secure flag is set for all cookies
- 7. RPMXCON-74387: Assignments Background Process (BGP) Modularization
- 8. RPMXCON-81299: Decouple CAL Tagging actions from Coding Form coding action
